

## **Contractor Safety at Energy Future Holdings**

Energy Future Holdings cares deeply about all people that work in our facilities. We strive to have every person complete every workday safely and return home to their families that way that they left for work. This is a very high standard that truly focuses on Zero Injuries. In order to accomplish this objective, everyone in our facilities must contribute with a Zero Injury mindset that is well beyond their obligations for regulatory (MSHA/OSHA) compliance.

We want to partner with our contractors in providing a safe work environment. As a contractor to Luminant this means that we will be asking you for information about your safety program, injury records and compliance history. This information will then be included in our bid evaluation and awarding of contracts. We want to work with people who are committed to safety.

Lastly, as contractor work crews arrive at our locations, they can expect a site orientation and safety overview, an inspection of all mobile equipment and verification of required certifications and training. Then, as the job progresses, we want to partner with the contractors crew through discussions and inspections to ensure that the work environment is safe.

We value the people and the work that our contractors and partners bring to Luminant and want to set the highest standards for safety as we strive for an injury free workplace. We forward to working with anyone that embraces this vision.
